New Maternity Ward

Renovations for new maternity ward

Project involved a significant gut and renovation of an existing 11,000 s/f 4th floor Medical/Surgical patient bed unit at **The Kingston Hospital** for conversion to a new Maternity Department. The new unit was constructed to consolidate the two individual departments at **The Kingston Hospital** and **Benedictine Hospital** as part of the merger of these two facilities.

The project involved the construction of a new C-Section Procedure Room, Nursery, and eight new Labor & Delivery Rooms along with support spaces and toilet rooms.

As with most medical projects the mechanical systems were critical with new roof-top air handlers, completely new duct system, HEPA filter/fan unit for the Nursery, addition of hot water reheat coils throughout, upgrades and replacements of medical gas systems, and new Emergency Power circuiting throughout.

The renovation was rendered more challenging by its location directly above a functioning Cardiac Unit. The project was completed on-time in less than four months.

PROJECT HIGHLIGHTS

- U.W. Marx: Construction Manager
- Complete renovation of 11,000 s/f space for new maternity department
- New C-section procedure room and nursery
- 8 new labor and delivery rooms
