Gen*NY*Sis Center for Excellence in Cancer Genomics

New biotechnology cancer research center

This new biotechnology cancer research center was constructed using a fast-track delivery method. U.W. Marx served as construction manager at-risk on the facility, which was built as part of a New York State economic development program.

The 116,000 s/f research facility contains labs, vivarium, offices, conference spaces, seminar auditorium and fitness suite, allowing university faculty to conduct collaborative cancer research with industry partners in a state-of-the-art biotechnology facility. The facility houses specialized research areas for molecular biology, bioinformatics, genetic exploration and pre-clinical studies.

The Cancer Research Center also features a two-story "Wall of Memory and Hope" displaying plaques or inscriptions from donors who wish to memorialize individuals affected by cancer.

U.W. Marx self-performed the concrete portion of the project to accelerate the schedule and meet the owner's contractual obligations.

PROJECT HIGHLIGHTS

- U.W. Marx: Construction Manager
- Sustainable design features included natural light throughout the facility and water-conserving plantings around the building
- **Project of the Year**, Honorable Mention, CMAA NY/NJ Metro Chapter
