

CDTA Saratoga Springs Rail Station

Saratoga Springs, NY

This award-winning project involved the demolition and restoration of an historic train station in the upstate New York resort town of Saratoga Springs. Constructed for the **Capital District Transportation Authority**, the design features of the new facility reflect the style of the surrounding Saratoga community.

Improvements at the site included a new entrance road, new utility connections, enhancement of intermodal access and new infrastructure. Structural improvements included all new utilities, new station façade and new roof. The new structure has a larger passenger waiting area, larger windowed areas, and retail space.

Intensive value engineering efforts by the **U.W. Marx Construction Company** team enabled the CDTA to realize significant savings over original estimates. The project was recognized by the **Capital District Branch of the American Public Works Association** as **2006 Transportation Project of the Year** (<\$10 million.)

U.W. Marx Role: **CM Agency**

Construction Value: **\$5.5M**

Completion: **March 2004**
